Summary

AI/ML Engineer and Data Scientist with hands-on experience in machine learning, deep learning, natural language processing, and full-stack AI application development. Skilled in building scalable AI solutions, data preprocessing, model training, and deploying intelligent applications using Python, React, FastAPI, and SQL. Passionate about developing production-ready AI systems and leveraging data-driven approaches to solve real-world business challenges.

Education

Jeppiaar Engineering College, B.E. in Computer Science with Honours (Data Science) Nov 2022 – May 2026
• CGPA: 8.78/10

Experience

AI ENGINEER INTERN, Deffo Tech AI March 2026 – Present

- **AI Platform Development:** Developed enterprise Intelligent Document Processing (IDP) solutions to automate invoice understanding, validation, and business workflows.
- **Document Intelligence:** Built AI-powered document processing pipelines using OCR and Computer Vision to extract and structure invoice data into standardized JSON.
- **Generative AI:** Contributed to the CLM platform by developing multi-agent workflows powered by a 70B Large Language Model (LLM).
- **AI Validation:** Implemented intelligent validation and anomaly detection techniques to improve data accuracy, identify duplicate records, and support fraud prevention.
- **Technology Stack:** Python, CUDA, Hugging Face, Transformers, PaddleOCR, OpenCV, FastAPI, LLMs, Document AI, JSON, Git.

Projects

TRUSTSCAN PREDICTION  Jan 2026 - April 2026

Technologies: Python, React.js, Pandas, NumPy, Matplotlib, Scikit-learn, Jupyter Notebook

- Built TrustScan, an AI-powered system to detect phishing and scams by analyzing emails and associated domains. Implemented a full pipeline including company detection, web scraping, and security checks like WHOIS, DNS, and SSL. Generated a trust score using ML models to help users assess risk and make secure decisions online.

SENTINELGPT  May 2026 - June 2026

Technologies: Python, React, MongoDB, XG Boost, Fast API, Tensorflow, Transformer

- SentinelGPT is an enterprise-grade AI-powered cybersecurity intelligence platform that combines machine learning, real-time threat detection, and autonomous agents to provide comprehensive threat intelligence, incident response, and automated security scanning across URLs, files, and emails.

DEEPSHIELD DETECTION  Sep 2025 - Oct 2025

Technologies: Python, Pandas, NumPy, LSTM, Transformer, Scikit-learn, Pickle, Jupyter Notebook

- About AI-powered application designed to identify and prevent digital fraud by detecting deepfake and scam content across multiple modalities including images, videos, audio, text.

Skills

Languages : Python, Java

Databases : SQL

Front-end: JavaScript,HTML,CSS,React.js

Back-end: Node.js

Data Visualization: Power BI

Data Science: LLM, RAG, Langchain, OCR, Probability&Statistics, Machine Learning, DL
