Summary

Front-end Developer and Junior Data Scientist with experience in building scalable websites and developing machine Learning models. Skilled in creating innovative solutions, and a national-level hackathon participant (Smart India Hackathon, Google GDSC). Passionate about solving real-world problems with clean, efficient code.

Education

Jeppiaar Engineering College, B.E. in Computer Science with Honours

Nov 2022 – Jun 2026*

- GPA: 8.75/10

Experience

AI & ML ENGINEER INTERN, Deffo Tech AI – Hybrid, India

March 2026 – June 2026*

- Collecting and preparing large-scale datasets for LLM training and knowledge acquisition.
- Handled data formats like Parquet, and performed data preprocessing, cleaning, and transformation for model readiness. Improved data quality and consistency to support efficient training and accurate AI model performance.

AI & DATA ANALYTICS INTERN, Edunet Foundation– Remote, India

July 2025 – Aug 2025

- Contributed to the development of an AI-based smart irrigation system aimed at optimizing water usage in agriculture.
- Implemented machine learning models to analyze soil moisture, weather data, and crop requirements.

DATA SCIENTIST INTERN, 8Queens - Onsite, India

Sep 2025 – Oct 2025

- Applied machine learning algorithms such as Linear Regression, Decision Trees, and Random Forest to build predictive models for real-world datasets
- Collaborated with the team to develop and present a machine learning project, showcasing end-to-end model building, evaluation, and reporting..

Projects

TRUSTSCAN PREDICTION

Jan 2026 - April 2026*

Technologies: Python, React.js, Pandas, NumPy, Matplotlib, Scikit-learn, Jupyter Notebook

- Built TrustScan, an AI-powered system to detect phishing and scams by analyzing emails and associated domains. Implemented a full pipeline including company detection, web scraping, and security checks like WHOIS, DNS, and SSL. Generated a trust score using ML models to help users assess risk and make secure decisions online.

CHRONIC DISEASE PREDICTION 🔗

Sep 2025 - Oct 2025

Technologies: Python, Pandas, NumPy, Matplotlib, Scikit-learn, Seaborn, Jupyter Notebook

- Built a machine learning model to predict chronic diseases (diabetes, heart disease) using patient health records and lifestyle factors, enhancing early detection accuracy.

UBER RIDE PREDICTION 🔗

Sep 2025 - Oct 2025

Technologies: Python, Pandas, NumPy, Flask, HTML/CSS, Scikit-learn, Pickle, Jupyter Notebook

- Developed a machine learning model to predict Uber ride demand, integrated it into a Flask web app with HTML/CSS UI, and deployed it on cloud platforms for real-time user interaction.

Skills

Languages : Python, Java

Databases : SQL

Front-end: JavaScript, HTML, CSS, React.js

Back-end: Node.js

Data Visualization: Power BI

Data Science: ML Algorithms, DL Algorithms, Probability & Statistics
